

ULTRASOUND STUDY GUIDE

- **Technical knowledge**

- Physics and Safety, understand the following: 1) Physics of sound interactions in the body. 2) How transducers work, how the image is created, and what physical properties are being displayed. 3) Relative strengths and weaknesses of different transducers including various aspects of resolution.
 - Sound properties and interactions
 - Reflection
 - Attenuation
 - Scattering
 - Refraction
 - Absorption
 - Acoustic impedance
 - Speed of sound
 - Wavelength
 - Other
 - Transducer fundamentals
 - Transmit frequencies
 - Transducer components
 - Transducer types
 - Transducer pros and cons
 - Other
 - Beam formation
 - Focusing
 - Steering
 - Other
 - Imaging modes and display
 - 2D
 - 3D

- 4D
- Panoramic imaging
- Compound imaging
- Harmonic imaging
- Elastography
- Contrast imaging
- Scanning modes
 - 2D
 - 3D
 - 4D
 - M-mode
 - Doppler
 - Other
- Image orientation
- Other
- Image resolution
 - Axial
 - Lateral
 - Elevational / Azimuthal
 - Temporal
 - Contrast
 - Penetration vs. resolution
 - Other
- System Controls - Know the function of the controls listed below and be able to recognize them in the list of scan parameters shown on the image monitor
 - Gain
 - Time gain compensation
 - Power output
 - Focal zone
 - Transmit frequency
 - Depth
 - Width
 - Zoom / Magnification
 - Dynamic range
 - Frame rate
 - Line density
 - Frame averaging / persistence
 - Other
- Doppler / Flow imaging – Be familiar with the terminology used to describe Doppler exams. Be able to interpret and optimize the images. Be

able to recognize artifacts, know their significance, and know what produces them.

- Doppler phenomenon
 - Doppler equation
 - Modes (duplex, color, etc.)
 - Pulsed Doppler
 - Duplex Doppler
 - Color Doppler
 - Power Doppler
 - Continuous wave Doppler
 - 3D/4D Doppler
 - B-flow
 - Other
 - Doppler controls / Optimization- Know the function of the controls listed below and be able to recognize them in the list of scan parameters shown on the image monitor
 - Color box
 - Gain
 - Doppler angle
 - Pulse repetition frequency / Scale
 - Transmit frequency
 - Wall filter
 - Color write priority
 - Sample volume size
 - Packet size / Dwell time
 - Beam steering
 - Other
 - Doppler measurements – Know how to obtain and optimize the measurements listed below and how to interpret the results.
 - Velocity
 - Resistive index
 - Pulsatility index
 - Systolic/Diastolic ratio
 - Acceleration
 - Acceleration time
 - Volume flow
 - Other
 - Doppler – grey-scale trade-offs
 - Other
- Artifacts - Be able to recognize artifacts, know their significance, and know what produces them.
 - Shadowing

- Through transmission
 - Mirror
 - Reverberation
 - Ring-down
 - Comet tail
 - Speed propagation
 - Multipath
 - Refraction
 - Side-lobe
 - Slice thickness
 - Anisotropy
 - Noise
 - Electrical interference
 - Doppler
 - Aliasing
 - Tissue vibration
 - Spectral broadening
 - Blooming
 - Motion / Flash
 - Twinkle
 - Noise
 - Acoustic streaming
 - Other
 - Other
- Safety
 - Bioeffects - Understand the potential bioeffects of ultrasound and know how to monitor and minimize them.
 - Mechanical / Cavitation
 - Thermal
 - Mechanical index
 - Thermal index
 - Other
 - Transducer safety/care – Understand the care and cleaning of transducers.
 - Equipment quality assurance – Be familiar with how the performance and quality of ultrasound machines are checked.
 - Phantoms
 - Resolution (spatial and contrast)
 - Measurement accuracy
 - Maximum depth of penetration
 - Image uniformity
 - Image geometry/caliper accuracy

- Other
 - Regulatory / Accreditation – Be familiar with the ACR accreditation process.
 - Other
- **Pathological Diagnosis** – The list below includes the material that is most likely to appear on the Ultrasound Certifying examination. For the structures and conditions listed, be able to do the following: 1) Identify normal structures. 2) Recognize and differentiate normal, normal variants, artifacts and other abnormalities. 3) Determine the most likely diagnosis, develop a reasonable differential diagnosis, and know what can be reasonably excluded when presented with images. 4) Know what the most reasonable management is. 5) Know the relative strengths and weakness and the role of ultrasound with respect to other tests. 6) Understand their anatomy, embryology, and pathophysiology relevant to imaging.
 - Gastrointestinal (nonvascular)
 - Bowel
 - Normal
 - Normal variant
 - Congenital anomalies
 - Appendicitis
 - Diverticulitis
 - Epiploic appendicitis
 - Inflammatory bowel disease
 - Colitis
 - Intussusception
 - Ischemic bowel
 - Pneumatosis
 - Small bowel obstruction
 - Cancer
 - Esophagus
 - Stomach
 - Small bowel
 - Colon
 - Rectum
 - Metastases
 - Lymphoma
 - Gastrointestinal stromal tumor (GIST)
 - Malrotation
 - Anal sphincter
 - Normal
 - Tear
 - Fistula
 - Other
 - Other

- Liver
 - Normal
 - Normal variants
 - Congenital anomalies
 - Focal masses
 - Cysts
 - Simple
 - Complicated
 - Other
 - Cavernous hemangiomas
 - Hematoma
 - Biloma
 - Abscess
 - Pyogenic abscesses
 - Amoebic abscess
 - Candidiasis / fungal
 - Other
 - Granuloma
 - Echinococcus
 - Focal nodular hyperplasia
 - Other
 - Other
- Gallbladder
 - Normal
 - Normal variants
 - Phrygian cap
 - Other
 - Congenital anomalies
 - Agenesis
 - Duplication
 - Other
 - Gallstones
 - Sludge
 - Acute cholecystitis
 - Calculous
 - Acalculous
 - Gangrenous
 - Perforated
 - Emphysematous
 - Hemorrhagic
 - Other
 - Chronic cholecystitis
 - Wall thickening (nonbiliary related)

- Polyp
- Adenomyomatosis
- Porcelain
- Carcinoma
- Metastases
- Lymphoma
- Torsion
- Other
- Bile ducts
 - Normal
 - Normal variants
 - Congenital anomalies
 - Dilatation (extra- and intrahepatic)
 - Postcholecystectomy ectasia
 - Choledocholithiasis
 - Primary sclerosing cholangitis
 - Pyogenic cholangitis
 - Recurrent pyogenic cholangitis
 - AIDS cholangitis
 - Caroli disease
 - Choledochal cyst
 - Pneumobilia
 - Cholangiocarcinoma
 - Metastases
 - Lymphoma
 - Stents
 - Other
- Pancreas
 - Normal
 - Normal variants
 - Congenital anomalies
 - Cysts
 - Simple
 - Complicated
 - Other
 - Acute pancreatitis
 - Chronic pancreatitis
 - Pseudocyst
 - Pancreatic necrosis
 - Abscess
 - Cancer

- Islet cell neoplasm
 - Cystic neoplasms
 - Intraductal papillary mucinous neoplasm (IPMN)
 - Metastases
 - Lymphoma
 - Trauma
 - Transplant (nonvascular)
 - Pancreatitis
 - Pseudocyst ◦
 - Hematoma ◦
 - Abscess
 - Post-transplant lymphoproliferative disease
 - Other
 - Other
- Spleen
 - Normal
 - Normal variants
 - Congenital anomalies
 - Cyst
 - Simple
 - Complicated
 - Other
 - Splenomegaly
 - Infarction
 - Hematoma
 - Laceration
 - Granuloma
 - Abscess
 - Hemangioma
 - Hamartoma
 - Metastases
 - Lymphoma
 - Angiosarcoma
 - Splenosis
 - Other
 - Peritoneum
 - Normal
 - Normal variant
 - Congenital anomalies
 - Ascites
 - Abscess
 - Hemorrhage

- Metastasis
- Carcinomatosis
- Lymphoma
- Primary peritoneal cancer
- Mesothelioma
- Tuberculosis
- Omental infarct
- Free air
- Other
- Mesentery
 - Adenopathy
 - Fibrosis
 - Other
- Abdominal wall
 - Normal
 - Congenital anomalies
 - Hematoma
 - Abscess
 - Endometriosis
 - Hernia
 - Inguinal - not involving scrotum
 - Incisional
 - Ventral
 - Spigelian
 - Other
 - Primary neoplasm
 - Metastasis
 - Lymphoma
 - Desmoid
 - Lipoma
 - Postsurgical changes
 - Other
- Lymph nodes
 - Normal
 - Adenopathy
 - Lymphoma
 - Metastatic disease
 - Reactive/Infection/Inflammation
 - Other
 - Other
- Genitourinary
 - Kidney (nonvascular)

- Normal
- Normal variants
 - Extrarenal pelvis
 - Junctional parenchymal defect
 - Column of Bertin
 - Pelvic kidney
 - Other
- Congenital anomalies
 - Duplication
 - Horseshoe kidney
 - Agenesis
 - Crossed fused ectopia
 - Other
- Hydronephrosis
- Calculi
- Nephrocalcinosis
- Cyst
 - Simple
 - Complicated
 - Other
- Parapelvic cyst
- Polycystic disease – Autosomal dominant
- Polycystic disease – Autosomal recessive
- Multicystic dysplastic
- Acquired renal cystic disease
- Masses
 - Angiomyolipoma
